Position: Speaker for Side Event “Non CO2 GHG Reduction”

Abstract title: Challenges to tackle climate change in Sub-Saharan Africa

Abstract text (within 100 words):

In Sub-Saharan Africa, agriculture sector is expected to contribute to achieve food security and drive economic development. Also, net value of agriculture per person is decreasing. So, tackling climate change cannot be successful without an agricultural benefit like productivity or water supply. Through JICA’s several projects in Sub-Saharan Africa, it is found mitigation to climate change itself cannot be an agricultural benefit for farmers. Development of mitigation technology which contributes to the benefit and showing the benefit to farmers when disseminating is important.
