

Session Title: Behavior and Transportation Demand Change

Name: Brian Motherway

Position: Head of Energy Efficiency at the International Energy Agency (IEA)

Abstract title: Behaviour Change in Transport and its Energy and Climate Implications

The Covid-19 pandemic has resulted in a range of significant changes to transport behaviours around the world. These include altered commuting patterns due to home working, lockdowns and modal shifts. Longer distance travel has also been hugely affected, with business and tourism aviation activity collapsing. The IEA has been tracking global transport activity trends and their impacts on energy demand and emissions. This presentation will explore the latest data and discuss its impacts and its policy implications.
