

Session Title: Blue Recovery – Beyond Zero from the Ocean

Name: Karsten Stoltenberg

Position: Country Manager Japan, Equinor New Energy Solutions

Abstract title: Sustainable Ocean – an offshore energy producer’s perspectives

Established in 1972 in Norway, Equinor has developed into a global energy producer, with a majority of its operations being offshore. Equinor recognizes the tremendous challenges related to overfishing, pollution, and CO₂ emissions which put the ocean’s health under pressure. The presentation will cover Equinor’s strategic responses to these challenges in our offshore oil and gas operations, as well as our ambitions in low carbon solutions. Further, Equinor has already significant activities in offshore wind, and our ambition is to strengthen this position to become one of the global majors in offshore wind. As one of the lead companies in OREAC (Ocean Renewable Energy Action Coalition) we will present how offshore wind can contribute to the transition to a sustainable ocean economy and the reduction of CO₂ emissions.
