

Session Title: Sustainable Food System for 2050

Name: Ishii Naoko

**Position: Executive Vice President and Professor, the University of Tokyo,
Director for Center for Global Commons**

**Abstract title: Transformation of the food system provides solution to challenges
at global scale**

The food system poses huge pressure on the precarious planetary stability, as it accounts for one quarter of GHG emissions and 60% of biodiversity loss since 1970s. its transformation provides solution to both planetary and human health, leading to new business opportunities.
