

# Sarah Chandler

## **Position/Department/Division/Institution/Organization**

Senior Director/Environment and Supply Chain Innovation/Operations/Apple

## **Country**

USA

## **Career history**

Sarah Chandler leads Environment and Supply Chain Innovation at Apple. Her team is responsible for embedding and upholding Apple's values throughout our supply chain. Working cross-functionally, these teams are creating innovative solutions to enable Apple's commitments to be carbon neutral by 2030, to one day make all of our products using only recycled or renewable material, and to provide safe and healthy working environments where everyone is treated with dignity and respect throughout our supply chain. They are also responsible for holding Apple's suppliers to the highest standards of environment, labor, and human rights protection, from responsible materials sourcing practices to workplace health and safety, from increasing the use of greener materials to conserving finite resources, from supporting suppliers' transition to renewable energy to providing educational opportunities for the people working in our supply chain. Sarah joined Apple in 2006 and holds an M.B.A. and Bachelor of Science degree in Earth Systems, both from Stanford University. Prior to Apple, Sarah served as the Executive Director of a nonprofit providing environmental education and leadership experiences for low-income high school students. Sarah can trace her environmental roots back to her upbringing on a maple syrup farm in Massachusetts.

## **Areas of expertise**

Sustainability, clean energy, circular economy, operations, procurement
