

**Session Title: The co-hosted event by UNIDO**

~Achieving global carbon neutrality

– collaboration with developing and emerging nations~

**Name: Yoshino Akira**

**Position: Director, Global Zero Emission Research Center (GZR), National Institute of Advanced Industrial Science and Technology (AIST)**

**Abstract title: Future prospects for technology and innovation**

Lithium Ion Batteries greatly contributed to the IT revolution which had been achieved by various technological innovations and their combination. The global environmental issues are among the most urgent difficulty confronted by human beings to date. It should be impossible to solve by a single technology only. To achieve a truly sustainable society by the “ET revolution (Environmental and Energy Revolution)”, a corporation system that transcends institutional frameworks and also national frameworks would be essential. It is my sincere hope to invite the best human intelligence to the Global Zero Emission Research Center serving as the hub, to resolve together the global environment issues common to all humankind.
